

EMBLEM E.P. GREASE

These greases are similar to the Emolube Grease being formulated from lithium soaps and the same highly refined high V.I. oils as well as rust and oxidation inhibited. However, for the tougher lubrication applications that exist they have been fortified with unique extreme pressure additive to prevent any metal to metal contact under the most severe conditions.

Emolube 300 AEP as a N.L.G.I. No. 00 is ideal for centralized lubrication systems through small lines. It is very satisfactory in certain gear boxes that call for 00 EP grease.

Emolube 300 EP as a N.L.G.I. No. 0 grease commonly used in centralized lubrication systems where the grease is used to seal out water and dirt.

Emolube 301 EP as a N.L.G.I. No. 1 grade lubricant that is ideal for automatic dispensing equipment. It serves well as a winter grade lubricant in cold weather applications such as mining, quarry operations and construction.

Emolube 302 EP is a N.L.G.I. No. 2 lubricant that is most popular for general lubrication whether it be automotive, farm, construction or mining, it assures that extra protection.

Typical Properties

	300AEP	300 EP	301 EP	302 EP
N.L.G.I. Grade	00	0	1	2
Worked Penetration	400-420	355-385	310-340	265-295
Dropping Point °F	N/A	325	330	330
Oxidation Stability # Loss/100 hrs.	N/A	5	5	5
Bearing Corrosion Test Rating D-1743	N/A	Nil	Nil	Nil
Timken # OK Load Min	40	45	45	45
Shell Roll Test % Change	N/A	N/A	10 max	15 max.
Soap Type	Lithium	Lithium	Lithium	Lithium
